

RAHUL KARANDE

+91 9272536709 | Pune, India | rahulkarande.web@gmail.com | linkedin.com/in/rahul-karande | github.com/RahulKarande1695

PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years of experience building scalable enterprise applications using the MERN stack. Also skilled in Next.js, TypeScript, and Redux Toolkit for modern frontend architecture.

Proven track record delivering production-grade solutions for Tata Motors and JLR. Covered real-time shop floor operations, vendor billing automation, and EV brand experiences.

Technology-agnostic mindset with the ability to adapt quickly across stacks and evolving tools. Also exploring emerging Gen AI-assisted development practices.

Experienced in mentoring junior developers with a strong ownership mentality and a collaborative, team-first approach.

Recognized for reliable client communication, effective timeline management, and consistent delivery under pressure.

SKILLS

Languages & Frontend: JavaScript (ES6+), HTML5, CSS3, TypeScript, React.js, Next.js

Backend, Database & Auth: Node.js, Express.js, RESTful APIs, MongoDB, Mongoose, JWT Authentication, RBAC, Axios Interceptors

State Management & UI: Redux Toolkit, Zustand, React Query, Context API, Material-UI, Tailwind CSS, Bootstrap, Mantine, GSAP

Architecture, DevOps & Tools: Micro-Frontend (Module Federation), CI/CD, Agile Scrum, AWS, Vercel, Docker, Git, Webpack, Vite, Jest, Postman

AI-Assisted Development: GitHub Copilot, Claude, Cursor IDE, MCP

Soft Skills: Team Leadership, Mentoring, Client Communication, Stakeholder Management, Agile Collaboration

WORK EXPERIENCE

React.js Developer — Vega Intellisoft Pvt Ltd. Sep 2024 – Present | Pune, India

- Architected enterprise-grade frontend modules with token-based authentication and role-based access control (RBAC).
- Supported multi-role workflows across production environments.
- Resolved 'page unresponsive' crashes on heavy data modules using code splitting, lazy loading, and React.memo.
- Improved app load time and Web Vitals (LCP, FCP, TTI).
- Implemented Axios interceptors for centralized API error handling and memory leak detection.
- Led performance audits via Lighthouse/Chrome DevTools and coordinated fixes across Agile sprints.
- Managed production rollouts end-to-end.

Associate Software Engineer — Pinnacle IT Solutions | Avinya Lab Tech Apr 2022 – Sep 2024 | Pune, India

- Developed high-performance SPAs with protected routing and dynamic data workflows.
- Implemented complex conditional rendering based on user roles and application states.
- Built RESTful APIs and MongoDB-backed services (Node.js/Express.js) alongside frontend modules for full-stack feature delivery.
- Implemented centralized API error handling via Axios interceptors and custom hooks.
- Built modular component architecture for scalable, maintainable codebases.
- Mentored 4 junior engineers on React.js, state management, and component design patterns.
- Coordinated directly with stakeholders for requirement gathering and sprint planning.

KEY PROJECTS

Supplementary Invoice Management System — Tata Motors

Stack: MongoDB, Express.js, React.js, Node.js (MERN), Redux, Axios, Docker, Jest | Domain: Supply Chain & Vendor Management

- Built a self-service MERN billing portal, eliminating physical plant visits for 100+ vendors.
- Enabled full invoice lifecycle (submission → validation → approval) remotely.
- Designed RESTful APIs (Node.js/Express.js) and MongoDB schemas (Invoice, Vendor, Approval) using Mongoose.
- Supported the end-to-end approval workflow.
- Automated cover note PDF generation and Excel-based data validation on the backend.
- Removed manual submission errors and cut processing to zero manual steps via auto-approval.

Plant Maintenance & Workforce Management System — iTechGenic Global Pte Limited

Stack: MongoDB, Express.js, React.js, Node.js (MERN), TypeScript, Redux Toolkit, React Query | Domain: Industrial IoT & Plant Operations

- Built an end-to-end MERN plant maintenance system monitoring asset health (boilers, pumps, machinery).
- Used parameter-based calculations for scheduled maintenance tracking.
- Developed REST APIs and MongoDB schemas (Node.js/Express.js) powering engineer productivity analytics, hierarchical task management, and risk/delay assessment.
- Implemented an intelligent auto-substitution module to reassign tasks during unplanned absences, ensuring continuous plant operations.

JLR CKD Quality & Configuration Platform — Tata Motors / Jaguar Land Rover

Stack: React.js, TypeScript, Redux Toolkit, Zustand, React Query, Material-UI, Module Federation | Domain: Automotive Manufacturing

- Digitized assembly line operations across 2 JLR plants (Pune & Chennai Panpakkam) covering 35–42 active stations.
- Replaced manual processes with a real-time MES-based shop floor system.
- Built independent station-wise UIs for 3 user roles (Operator, Senior Operator, Line Manager).
- Enabled cross-plant real-time data sync, eliminating unauthorized stage skipping and reducing line stoppages.

EDUCATION

Bachelor of Engineering (B.E.), Computer Engineering — YSPM's Yashoda Technical Campus, Shivaji University | Graduated: 2020 | Score: 75%

Full Stack Development Diploma (MERN) — FirstBit Solutions | Jun 2021 – Dec 2021
